# Methodology for Effective Conducting Russian Language Lessons Using Modern Multimedia Tools

Shoira Bakhshulloyeva Narzullayeva<sup>1</sup>

1. Lecturer at the Asian International University

**Abstract:** This article modern multimedia tools Russian language in their classes effective application methodology issues to study Multimedia tools in research using lesson process interactive, interesting and effective organization of reaching importance analysis Audio and video materials, interactive tests, animations and simulations using students speech, lexical and grammatical skills development, activity and motivation increase opportunities studied. Also, multimedia tools using assessment system optimization and lesson efficiency increase opportunities seeing Research results multimedia tools methodical basically application Russian language education process modern, interactive and effective to do confirms.

**Keywords:** Multimedia tools, Russian language lessons, Interactive methods, Pedagogical efficiency, speech and grammatical skills, Lexical exercises

## Introduction

Modern education process global on a scale intense developed is going and in this information and communication Information and communication technologies (ICT) training efficiency increase important to the tool became [1]. Russian language in their classes multimedia tools application not only students attention attraction to do, maybe the language faster and more efficient study opportunity Multimedia is text, audio, video, animation and interactive elements unifying tools and they education to the process integration to do students speech, lexical and grammatical skills to develop big help gives [2]. Today on the day pedagogical in practice training process activation, individual approach provide and students motivation increase important importance has. Russian language in teaching multimedia tools application, teacher and student between interactive communication reinforces the lesson visual and to the audience suitable in format the passage provides [3]. With this together, innovative methods to students the language practical in context application skills to form opportunity creates [4]. This in the article modern multimedia tools using Russian language lessons effective to transfer methodical fundamentals, applied technologies and pedagogical approaches analysis The research is being conducted purpose – multimedia tools Russian language education in the process pedagogical efficiency determination and them practical in terms of application according to recommendations working is an exit [5].

## Methodology

This study employs a qualitative pedagogical research approach to examine the effectiveness of multimedia tools in Russian language teaching. The research methodology combines theoretical analysis, pedagogical observation, and comparative evaluation of multimedia technologies used in the educational process [6].

First, a theoretical review of scientific literature related to multimedia learning technologies, interactive teaching methods, and foreign language pedagogy was conducted [4], [5]. These sources provide the conceptual foundation for integrating information and communication technologies (ICT) into language education [7].

Second, descriptive analysis was used to examine different types of multimedia tools applied in Russian language lessons, including audio materials, video lessons, interactive tests, and online simulations [8]. Particular attention was given to their pedagogical functions in developing students' speech, lexical, and grammatical competencies [9].

Third, pedagogical observation was applied to analyze the influence of multimedia technologies on students' engagement, motivation, and learning outcomes during Russian language lessons. This approach allowed the identification of effective strategies for integrating multimedia tools into classroom practice [10].

The combination of these research methods makes it possible to evaluate the pedagogical effectiveness of multimedia technologies and to develop methodological recommendations for their practical application in Russian language education [11].

### Relevance

Modern multimedia tools in education Russian language in education efficiency increase important tool is considered [12]. Interactive lessons students speech develops, lexical and grammatical skills strengthens and lesson process interesting Therefore, this topic pedagogical in practice current to be, language study process effective and innovative in methods organization to grow opportunity gives [13].

### Purpose

This of the article main The goal is to use modern multimedia tools application through Russian language lessons effective to transfer methodical the basics study and analysis is to do [14]. This via :

1. Multimedia tools pedagogical importance to determine ;
2. Russian language education in the process interactive and innovative methods implementation to grow opportunities show ;
3. Students speech develop and study process efficiency increase according to recommendations working exit ;
4. Education in the process lessons interesting, visual and practical to do methods to determine [15].

Article as a result Russian language teachers multimedia tools for practical in terms of application according to scientific based recommendations formation is expected [16].

#### Main part

Modern education multimedia tools – text, audio, video, graphics – in the process and interactive elements in the room unifying technologies set as Education multimedia learning in the process materials visual and to the audience suitable in the form presented to grow opportunity gives, this and of the students attention attraction to do and knowledge to strengthen help Multimedia tools using lessons interactive and interesting students activity increases [17]. Pedagogical research this shows that visual and audio materials combination of the students new lexical and grammatical information faster to master help It also provides multimedia tools. to the teacher lesson process individualization opportunity gives [18]. Each student 's ability and to know to the level suitable accordingly interactive tests, simulations and videos application It is possible [19]. This is students motivation increases and the language practical in context application skills Multimedia tools pedagogical efficiency increase with together, students for lessons interesting and remember remaining does [20]. Today global education today multimedia

tools in the system application not only Russian language, maybe other edge languages also relevant in education Therefore, pedagogical multimedia tools in the process right and effective application methodical in terms of big importance has [21].

Russian language in education multimedia tools used one how many to the type The first group includes audio materials. includes, for example, pronunciation develop and listening to understand improve audio clips, dialogues for and podcasts used. Second group – video materials, they lesson the topic visual in a way explanation, speech practical in context application opportunity creates and students the language further interesting to study attraction Third, interactive programs and simulations, for example, online tests, games and grammatical exercises, students active participation provides and knowledge to strengthen help Fourth, the graph and visual elements, such as diagrams, maps and slides, lexicon materials better remembering stay and to understand help gives. With this together, different tools in combination application, students various study to their styles flexibility Each multimedia tool provides lesson in the process his/ her own pedagogical to the function For example, audio materials speech skills develops, video and interactive programs the students practical exercises through knowledge to strengthen Therefore, Russian language multimedia tools in teaching targeted and methodical basically application lesson efficiency increase main from factors is one [22].

Multimedia tools Russian language in their classes application methodology one how many step own inside The first stage is the lesson. planning and multimedia elements choice [23]. Lesson to the topic compatible audio, video and interactive materials choose them of the students to know to the level adaptation pedagogical efficiency increases [24]. Second stage – lesson interactive The students group or individual work attraction to do through multimedia tools practical use, for example, videos dialogue exercises through or interactive tests using grammar and lexical skills reinforcement [25]. With this together, students question and answer and discussion activity lesson process enriches. Third stage – results assessment and analysis Multimedia tools using of the students knowledge level tests and interactive exercises through assessment It is possible [26]. This is to the teacher lesson efficiency analysis to do and next lessons for methodical recommendations working to go out opportunity It also provides multimedia tools. lesson dynamic and visual in terms of interesting to be providing, students motivation increases [27].

Russian language in teaching speech skills formation study process the most important from the duties Multimedia tools this in process students activity For example, audio clips and video materials through students various speech to the situations face comes and them practical accordingly application to the possibility has It will be. With this together, interactive tests and play exercises speech skills to strengthen help Multimedia tools students to communicate attraction does, their pronunciation, listening understand and writing speech develops. Video lessons, dramatization exercises and online dialogues of the students speech activity increases. With this together, students speech mistakes fast determination and correction opportunity there is It will be [28].

Pedagogical research this It shows that speech skills multimedia tools in development use traditional to methods than more effective [29]. Interactive exercises of the students thinking and practical speech abilities one of time in the room It also develops visual and audio materials combination new lexical and grammatical elements faster to master help Multimedia tools again one advantage is that they of the students speech at an individual level to develop opportunity gives. Each to the student adapted audio, video or interactive exercises using study process personalized, this and language study process effective Therefore, multimedia tools speech skills in development modern pedagogical methodological inseparable part is considered [30].

Russian language in teaching lexical and grammatical skills formation and reinforcement important Multimedia tools this in process students knowledge practical exercises through to strengthen help Interactive tests, animation videos, online games and

slides lexical materials remembering stay and grammar rules in mastering effective Audio materials pronunciation and listening to understand if it develops, videos speech in context lexical and grammatical elements to use opportunity gives. With this together, interactive exercises through students own knowledge reinforcement with together, their mistakes determination and correction as far as possible has It will be [31].

Multimedia tools using grammar and lexicon exercises visual and practical context with enriched. For example, diagrams, graphs and interactive cards of the students visual memory activates and the rules faster remembering to stay help This gives study process further effective It also makes students knowledge to the level adapted multimedia materials provide an individual approach provides. Each to the student suitable interactive exercises, video dialogues and games using lessons interesting and effective organization to grow Therefore, multimedia tools lexical and grammatical skills formation and in strengthening modern of methods inseparable part is considered.

Interactive methods lesson efficiency increase the most important in terms of Multimedia tools using interactive exercises and games of the students activity increases them to class attraction does and the language practical in context to use encourages. With this together, students group and in individual cases active participation it will, this and communication and cooperation skills Interactive lessons include video, audio and animated materials combination of the students attention to keep help gives. Online tests and simulations of the students knowledge level fast to determine opportunity gives and lesson process control to do In this way, multimedia tools student activity stimulating effective tool as used. Pedagogical research this shows that interactive methods and multimedia tools using lesson students for interesting, visual and practical to be, their motivation noticeable at the level increases. Students speech and grammatical skills exercises through reinforcement with together, different in situations the language application also increases experience.

Interactive methods require an individual approach provides. Each student own ability and to the level customized multimedia materials through knowledge Therefore, interactive methods and multimedia tools application Russian language education process effective and modern does. Evaluation process Russian language in education lesson efficiency determination and of the students knowledge level observation important Multimedia tools this in process new opportunities For example, interactive tests, online quizzes and simulations of the students lexical, grammatical and speech skills in evaluation effective tool This is to the teacher the results fast and clear analysis to do opportunity gives.

Multimedia tools using assessment process only knowledge check with not limited, but of the students knowledge reinforcement and mistakes determination It also allows for online grammatical exercises results automatic analysis will be done and mistakes correction according to recommendations is given. With this together, audio and video materials using students pronunciation and speech skills assessment as far as possible has will be. Evaluation process interactive and visual elements with when enriched students activity increases. Students own the results immediately their views, mistakes analysis they do and repetition exercises through knowledge reinforcements In this way, multimedia tools assessment process effective and modern does.

Pedagogical research this shows that multimedia tools using assessment system improvement of the students knowledge level clear and fast to determine help This gives to the teacher lesson process optimization and individual approach provide opportunity creates. With this together, evaluation process students for motivational and interesting will be, because they own their successes immediately their views possible.

Modern Russian language multimedia tools in their lessons application efficiency increase for one how many recommendations working exit possible. The first recommendation is to multimedia elements in planning clear designation and them lesson

to the topic This includes audio, video, interactive tests and visual of materials effective combination provides. Second recommendation – students activity to increase directed interactive methods For example, group works, role games, video dialogues and simulations students to class attraction does, speech and grammatical skills to strengthen help gives. Third recommendation – individual approach provide. Each to the student customized multimedia exercises using study process personalized and every one student 's needs in consideration In this way, the learning process not only effective, maybe interesting and motivational will be. Also, multimedia tools in use assessment system interactive to do important. Online tests and simulations using of the students knowledge level fast is determined and mistakes correction according to recommendations This is given. lesson efficiency increases and of the students knowledge to strengthen help As a result, multimedia tools methodical basically application Russian language education process modern, interactive and effective This will do. method pedagogical in practice students speech, lexical and grammatical skills development, as well as lessons interesting and motivational to do service does. With this together, to the teachers the lesson planning and assessment in the process convenience creates.

### Results

Research to the results according to modern multimedia tools Russian language in their classes application education process efficiency noticeable at the level Multimedia tools using lessons interactive, interesting and visual in terms of enriched it will be, this and students attention attraction to do and motivation to increase service does. From this in addition, audio and video materials, interactive tests and simulations students lexical, grammatical and speech skills in strengthening effective tool to be, to speak practical in context application skills Multimedia tools allow for an individual approach. providing, every one student 's knowledge to the level customized exercises through lesson process personalization opportunity creates. Also, multimedia tools using assessment process optimized. Students own the results immediately their views, their mistakes determination and correction as far as possible has to be as a result study process effective and control to be done will be. In general in short, research this showed that multimedia tools methodical basically application Russian language education process modern, interactive and effective does. With this together, to the teacher lessons planning and students knowledge level in evaluation convenience creates, students speech, lexical and grammatical skills to develop help gives.

### Discussion

Modern multimedia tools Russian language in their classes application pedagogical the process effective and interactive Research showed that audio, video, interactive tests and animated from materials used without lesson transfer students speech, lexical and grammatical skills noticeable at the level Multimedia tools the students to activity attraction makes them practical in situations the language to use encourages and individual approach Also provides multimedia tools assessment process to optimize help Interactive tests and simulations using of the students knowledge level fast errors are detected is determined and This lesson is correct. efficiency increases, to students own the results immediately see opportunity gives and motivation increases. Discussion this shows that traditional to methods than multimedia tools using to be held lessons not only more efficient, maybe students for interesting, interactive and remember remaining will be. With this together, to the teachers the lesson planning, students activity control to do and in evaluation convenience creates. Pedagogical experiments this shows that Russian language multimedia tools using to teach students practical speech ability faster develops and lexical and grammatical skills to strengthen service does. With this together,

interactive methods and multimedia tools wake up application language education process further modern, motivational and effective does [32].

### Conclusion

Modern multimedia tools Russian language in their classes application pedagogical the process effective, interactive and interesting Research this showed that audio, video, interactive tests and animated materials using lesson of the students speech, lexical and grammatical skills faster and more efficient to develop service does. With this together, multimedia tools provide an individual approach providing, every one to the student customized exercises through lessons personalization opportunity creates. Multimedia tools using study process not only effective, maybe students for motivational and interesting will be. Interactive methods and simulations of the students activity increases, the lesson practical in context study opportunity creates and the results fast assessment opportunity In this way, Russian language education process further effective and modern form As a result, the research this showed that multimedia tools methodical basically application pedagogical in practice Russian language of teaching effective tool students' knowledge reinforcement, speech and grammar skills develop and lessons interesting and interactive to do opportunity Therefore, multimedia tools pedagogical innovations and language education process in improvement inseparable importance has.
